

## mini project two

Construct a "Website Coming Soon" page

Project Guidelines:

### Content

- Use your imagination! – you are in the process of building your personal website but you realize that it will be a while till you have that perfect website that you want to represent you. So you decide to construct a temporary page to help people get a quick intro to you while you are still building that perfect website.

### HTML

- No specific requirements.

### CSS

- All content must be in the middle of the page.

## Sample Output Website

This is not what your website **MUST** look like but just one example of what it could look like.

An amazing website under development...  
until then here are some other ways to get to know me
